Hi Erik:

As we just discussed, we need to prepare data tables for all the drinking water samples collected in East Chicago, to send out all the letters by the end of the week (per direction by the RA). Unfortunately, this will mean manually tabulating data from many of the existing preliminary pdfs, into our summary table format.

Can you help with the attached 7 pdfs, creating a separate tab or worksheet for each batch of samples:

1. Tabulate all results (template attached), paying attention to units
2. For those results that are reported as “ND”, enter the result as the MDL followed by “U”. If there is no MDL column, enter the result as the RL followed by “U”.
3. Include laboratory qualifiers such as B, *, etc.
4. Make sure to include the Site number (the four digit number at the end of Client Sample ID) and the sample date are correct on the table, based on the headings in the analytical report.

 [16100791\(SRS\)Rev0 Preliminary.pdf](#)
 [16100795\(SRS\)Rev0 Preliminary.pdf](#)
 [16100799\(SRS\)Rev0 Preliminary.pdf](#)

If you send me the Excel file(s), I can add some of the other details that are not in the analytical report and do a quick check of the numbers:

1. Add the address, “before excavation” or “after excavation” (S1 versus S2, respectively, in column I), and sampled fixture (e.g. Kitchen Sink Faucet) based on the master spreadsheet:

https://usepa.sharepoint.com/sites/R5/wd/EastChicago/_layouts/15/guestaccess.aspx?guestaccesstoken=otbAvZv

2. Verify the lead results match the lead results in the master spreadsheet for that site and date

Let me know where you stand by tomorrow afternoon, and I might be able to take back a couple if you don't get to them.

Thanks!

Val
